

A more robust and reliable filter element

## PTI DryPak™ Hydrophilic **Moisture Control Elements**

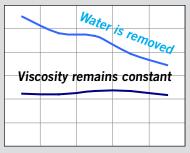

Standard Micron Rated Particle Elements with Integral Water Removal

## **Features**

- Long-Life PTI  $\beta_{X(C)} \ge 1000 \text{ Glas-Tech}^{\textcircled{R}}$  media
- Low cost on going moisture control
- No significant clean delta-p increase
- Minor delta-p increase with a water saturated element
- Extends element life
- Controls and reduces free water, emulsified water, and dissolved water while maintaining the ISO cleanliness of the system

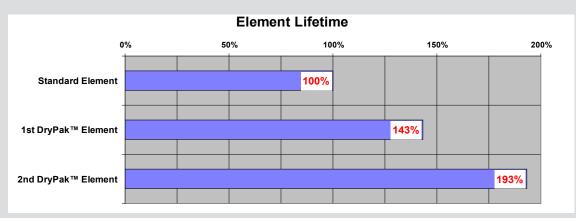

## **Product Description**

PTI DryPak™ Elements are inexpensive, cost-effective units that provide moisture control within a standard Particle Control Element. Water contamination adversely affects oil by catalyzing oxidation and rapidly depleting water-sensitive additives. Reducing water in oil stabilizes viscosities, reduces corrosion, inhibits the generation of waxes and gels, and protects depletion of the oil additive package. DryPak™ Elements protect systems against moisture-related conditions in the new, high performance fluids while in many cases extending the filter change intervals of elements in the system.

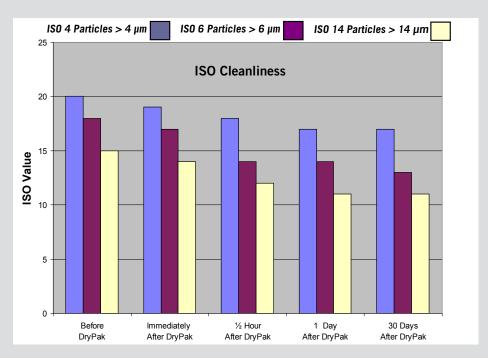

Time After DryPak™ Installed -->

PTI DryPak™ Elements protect against moisture-related conditions in the newest, high performance fluids while in many cases dramatically extending filter change intervals.

With continued use DryPak™ elements can steadily bring down ISO cleanliness levels - even as additional moisture enters the system.

## **Ordering Information:**

PTI DryPak™ elements are designated by adding the suffix "-W" to the element part number. Examples:

Standard Element is: DP83-150-HF-B DryPak™ Element is: DP83-150-HF-B-W

Elements in the DryPak<sup>™</sup> configuration are currently offered in the DP83, P83, PC83, RP83, RH83, H83, HF4, P97 and the PG element series as well as many PTI interchange elements.

For additional information please contact your PTI Distributor or the factory.
